

## 3.5x2.8x1.9mm Red & Green & Blue SMD LED

## OSTBPCS2C2B

#### **■**Features

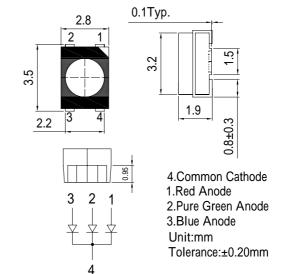

- High Luminous PLCC4 Top SMD LEDs
- 3.5x2.8x1.9mm Standard Directivity
- · Superior Weather-resistance
- UV Resistant Epoxy
- Higher Contrast by a black surface(RGB-Displays)
- White Diffused Type

## **■**Applications

- Indoor display(e.g. graphic displays)
- LED Chips can be controlled separately
- Full Color Displays, RGB-Displays
- · Other Lighting

## **■Outline Dimension**

(Ta=25)

■Absolute Maximum Rating

		(	,	
Item	Crimb of	Valu	Unit	
ntem	Symbol	Red	G/B	Omi
DC Forward Current	$I_{\mathrm{F}}$	30	30	mA
Pulse Forward Current*	$I_{FP}$	100	100	mA
Reverse Voltage	$V_R$	5	5	V
Power Dissipation	$P_{\mathrm{D}}$	78	108	mW
Operating Temperature	Topr	<b>-</b> 30 ∼ +85		
Storage Temperature	Tstg	<b>-</b> 40∼ +100		
Lead Soldering Temperature	Tsol	260 /5sec		-

<sup>\*</sup>Pulse width Max.10ms Duty ratio max 1/10

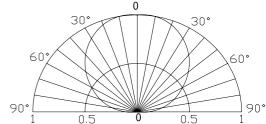

■Electrical -Optical Characteristics (Ta=25)

Item	Symbol	Condition	Min.	Тур.	Max.	Unit
DC Farmand Valtage	$V_F$ (Red)	I <sub>F</sub> =20mA	1.8	2.1	2.6	V
DC Forward Voltage	V <sub>F</sub> (G/B)	$I_F=20mA$	2.9	3.1	3.6	V
Reverse Current	$I_R$	$V_R=5V$	-	1	10	μΑ
	$\lambda_D(\text{Red})$	$I_F=20mA$	620	625	630	nm
Domi. Wavelength*	$\lambda_{D}(Green)$	$I_F=20mA$	520	525	530	nm
	$\lambda_D(Blue)$	I <sub>F</sub> =20mA	465	470	475	nm
	Iv(Red)	I <sub>F</sub> =20mA	330	450	-	mcd
Luminous Intensity*	Iv(Green)	$I_F=20mA$	500	700	-	mcd
	Iv(Blue)	I <sub>F</sub> =20mA	150	250	-	mcd
50% Power Angle	201/2	I <sub>F</sub> =20mA	-	120	-	deg

<sup>\*1</sup> Tolerance of dominant wavelength is +1nm

### **Precautions in Use for Surface Mount Diode**

#### **■ Storage**

· Storage Conditions

Before opening the package:

The LEDs should be kept at 30°C or less and 60%RH or less. The LEDs should be used within a year. When storing the LEDs, moisture proof packaging with absorbent material (silica gel) is recommended.

· After opening the package:

Soldering should be done right after opening the package (within 24hrs).

Keeping of a fraction, sealing and Temperature: 5~40 Humidity: Less than 30%.

If the package has been opened more than 1 week or the color of desiccant changes, components should be dried for 10-12hrs, at  $60\pm3$ .

- · Optosupply LED electrode sections are comprised of a silver plated copper alloy. The silver surface may be affected by environments which contain corrosive gases and so on. Please avoid conditions which may cause the LED to corrode, tarnish or discolor. This corrosion or discoloration may cause difficulty during soldering operations. It is recommended that the User use the LEDs as soon as possible.
- · Please avoid rapid transitions in ambient temperature, especially in high humidity environments where condensation can occur.

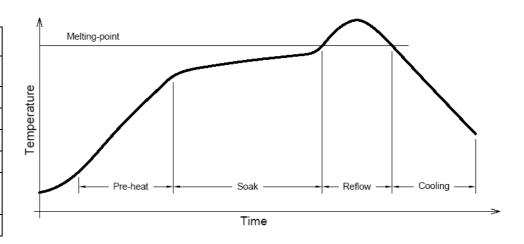

### ■ Soldering Heat Reliability (DIP):

IR Reflow soldering Profile

- · Reflow soldering should not be done more than two times.
- · When soldering, do not put stress on the LEDs during heating.
- · After soldering, do not warp the circuit board.
- · Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable,
- a double-head soldering iron should be used. It should be confirmed beforehand whether the

#### characteristics of the LEDs will or will not be damaged by repairing.

Soldering
Average ramp-up rate = $3^{\circ}$ C/sec. max.
Preheat temperature: 130°~185°C
Preheat time = 120 sec. max.
Ramp-down rate = $6^{\circ}$ C/sec. max.
Peak temperature = 230°C max.
Time within 3°C of actual
peak temperature = 25 sec. max.
Duration above 200°C is 40 sec. max.
